John – here you go. Chartrand is looking to work on this again. That isn't why I'm sending it to you. Look at the sediment and biota data.

Not a bad proposal. Good team. No significant original research.

Let me know what you think.

Mark

This may be helpful for your discussion tomorrow. Also, look at the sediment and biota DDT data from 1985 samples. Very compelling and never released before (to my knowledge).

Renee – I gave Jon a Scripps update as well. I should get a more final overview by the end of next week. Bottom line – probably over 100K barrels and spread out over the entire area they looked at. Federal Dumpsites seemed to be points on a map. The entire SP Basin seemed to be the dumpsite. Even some in state waters.

Also, Scripps continues to meet with Feinstein and NOAA. Congressional briefing 4-26 and press coverage the week of the 29th.

Let me know how it goes with Alan. Good proposal. Good team. Mostly a summary exercise with some additional scientific analysis.
